Task : 1   **Lecture** :

Create a Node.js Project, that has **server.js** file, the file must contain the server and DB connections.

Make sure to use **MongoDB, Express js,**
and the following NPM packages :

1. cookie-parser

2. cors

3. Needed packages to create the server & DB connections.

Create **public** directory to serve static files, and create a method to handle **404** in case the request accepts **html**, **json** or **text** as a response.
